ELVATE TECHNOLOGIES

Meralco Go

See what's coming on your bill, and what's happening on the line.

MERALCO HACKATHON 2026

ELVATE

THE QUESTION

Who here has been shocked by their Meralco bill?

You open the bill. The number is higher than last month. And the bill doesn't tell you why — just line items and a total.

Meralco Go answers that before the bill arrives.

MID-2020

50,000

bill complaints reached the ERC within weeks — about 80% of them about high bills.

Meralco said there was no overcharging. The bill simply didn't explain itself.

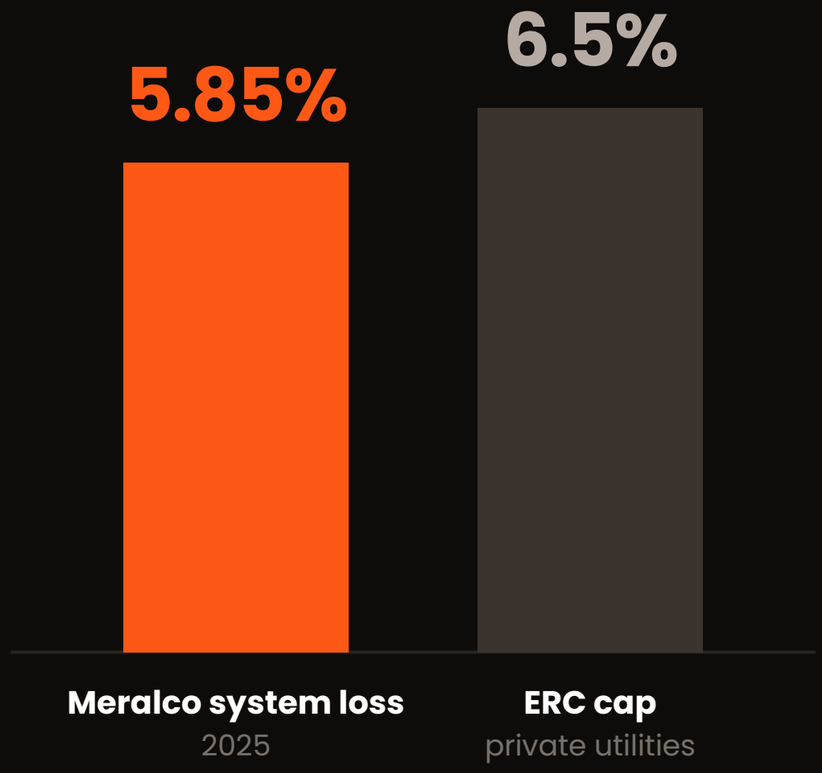

Sources: Inquirer, Jul 8, 2020 (ERC chair A. Devanadera) · GMA News · BusinessMirror

THE COST NOBODY SEES

₱27–28 billion

a year collected through the system loss charge, by Meralco's own estimate.

Theft is a small slice — but it overloads transformers and causes brownouts and fires.

Sources: GMA News, Aug 6, 2026 (Meralco COO, House energy hearing) · Inquirer Business, 2026 · Philippine Information Agency

TODAY

Both sides are waiting.

The customer

Sees their usage only after the billing cycle closes. By then the money is spent.

Meralco

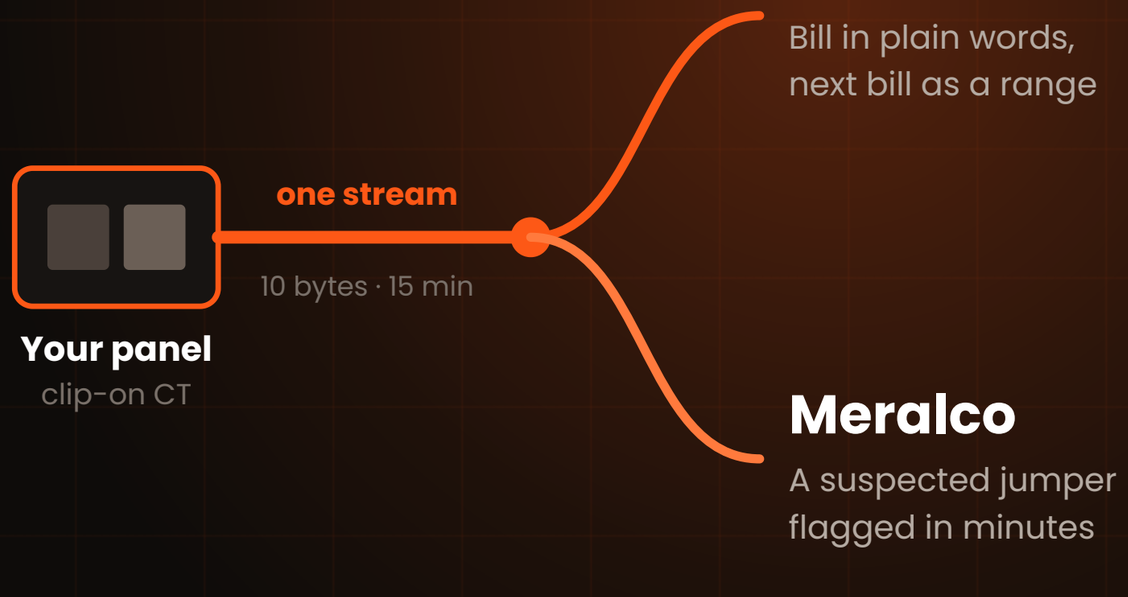

Finds a problem on the line only after an inspection, or after a complaint.

Nobody can see the line while it's happening.

BUILT FOR
Meralco Hackathon 2026

Meralco Go

One stream of smart meter data, sent over **LoRaWAN**, that serves two audiences.

TWO CATEGORIES, ONE BUILD

One system.

01

For the customer

An app: your usage, your bill in plain words, and a slider that shows the next bill before it arrives.

02

For Meralco

A dashboard: the same data flags unusual activity on the line, so the team acts early.

03

Three APIs

EMessage alerts · **EReport** replies · **EGovChain** keeps the record

MEET ALING ROSA

Live demo, in four beats.

01

Customer app

Usage this month, the bill in plain words, and a slider that predicts the next bill as a range.

02

The meter

Each reading arrives with voltage, current, power and total energy.

03

Something breaks

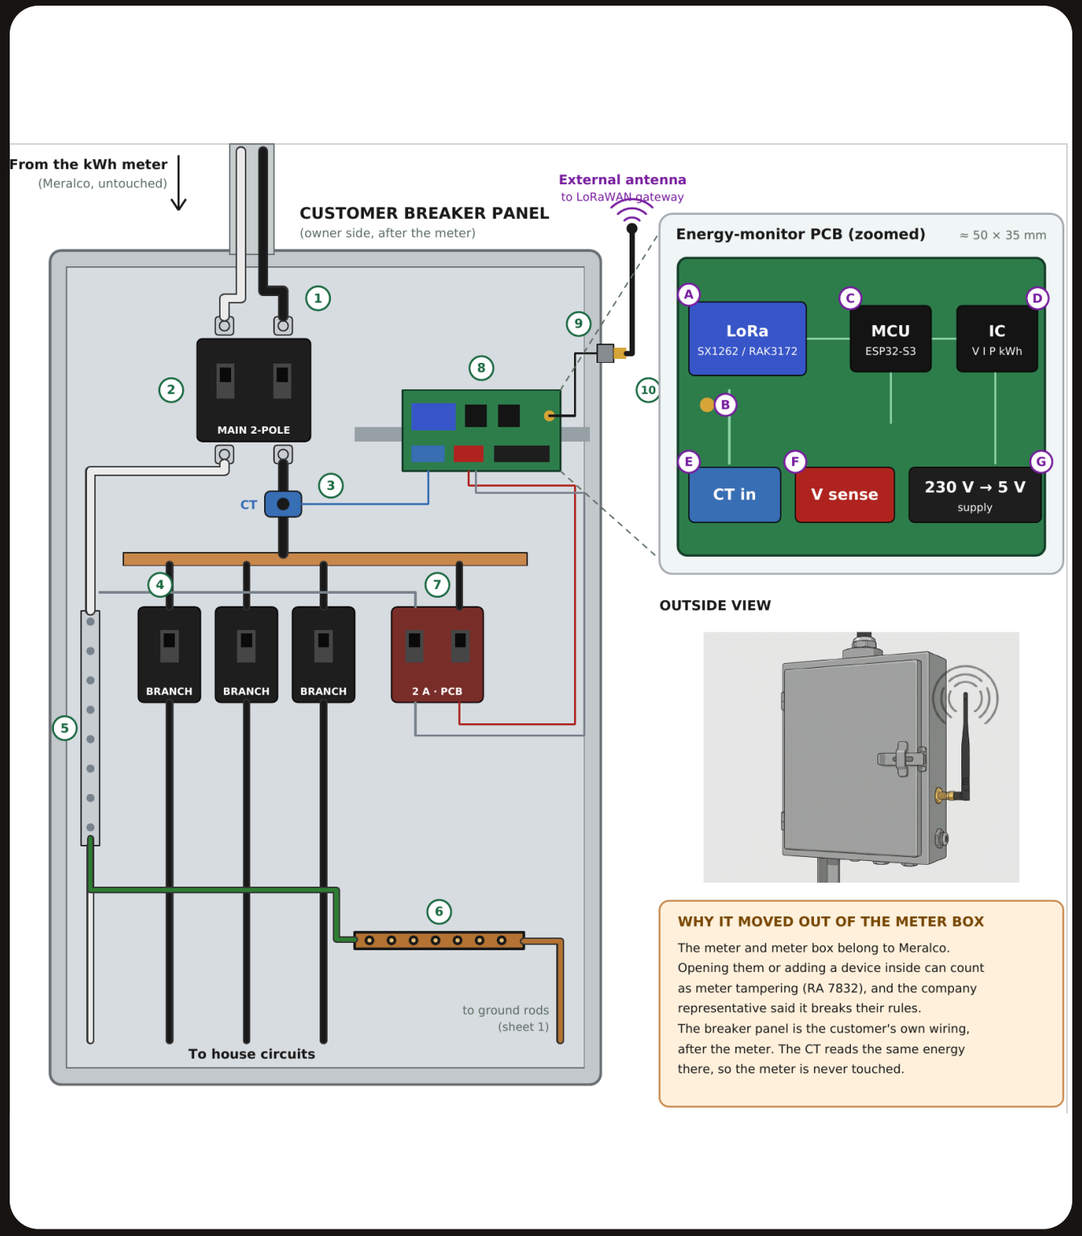

A surge is flagged for review. Rosa gets an EMessage alert and answers through EReport.

04

Trust

Every reading is written to EGovChain, so nobody can edit it later.

Only the meter readings are simulated. The app, the website and the API calls are real.

THE HARDWARE

Inside the breaker panel.

The meter box is Meralco's property, so we don't touch it.

Our board sits in the customer's own breaker panel, right after the meter. A clip-on CT reads the line with no wire cutting.

It sends a 10-byte reading to a gateway kilometres away.

END TO END

How it works.

01
Meter
Board in the breaker panel

02
Gateway
Hears meters kilometres away

03
Prediction
Readings, weather and calendar

04
Bill engine
kWh into pesos, published rates

05
App + dashboard
Both sides see the same data

The peso math is not AI

Fixed, checkable arithmetic. The model only predicts how much you will use.

Only the meter is simulated

It sends the same 10-byte reading a real board would, so nothing above it changes.

WHY IT MATTERS TO MERALCO

One stream of data, two problems answered.

250K smart meters installed, out of 8.3 million customers

12M targeted over the next decade

Daily Tribune, Nov 11, 2026 · Context.ph, Jul 29, 2026 · Power Philippines, Feb 11, 2026

CATEGORY 2

Know Your Bill

A customer who understands the bill before it arrives doesn't need to complain about it.

CATEGORY 3

Grid Intelligence

The same reading watches the line. A suspected jumper is flagged in minutes, not months.

WHAT'S NEXT

Roadmap.

PHASE 1 · DONE

Today

Working app, website and live API calls on simulated readings.

PHASE 2 · NEXT

Pilot

Real LoRaWAN boards, predictions checked against live readings.

PHASE 3

Connect

Plug into Meralco's smart meter data — no extra hardware.

PHASE 4

Scale

Dashboard for the grid team across the franchise area.

Our team.
